Residency status: New Zealand permanent resident

About Me

Curious and inquisitive, after pivoting from my previous career as a drama and speech teacher, I decided to pursue my long-time passion for technology and embark on a journey into software development. As a lifelong learner and self-considered problem solver, I was excited by the challenge of learning a new skill from scratch. Web development has proven to be just that, while also being highly rewarding. I have discovered how many of the daily websites and applications we take for granted are actually produced and work behind the scenes. I'm eager to expand my experience in the industry and continue to develop the technical knowledge I currently possess.

Experiences
